- 2 -

- The first floor of the new building is called the "preparatory section". In May 1953, 84 East German "Textima" carding machines, model 1952-53, were installed by East German specialists in this section. Each machine has a capacity of 35 kilograms of cotton per hour, and supposedly could produce 12,000 to 16,000 meters of wick in an eight hour period.
- The second floor of the factory is occupied by spinning machines; the make, 5. model, and number of which is unknown.
- The factory owns an old Ford truck, but the biggest part of the cotton is 6. transported from the factory in carts, provided by the local cart cooperative.
- During the winter of 1953-54 the power conditions were very bad; the electric 7. current was switched off hourly for 10 to 15 minute periods. For this reason, the workers earned only 150-200 leve per month, instead of their regular 500-600 levs when they had the power and could fulfill their norms.
- The majority of the workers come from Gabrovo or the neighboring villages, which are connected with the factory by regular bus service. Quarters for both male and female workers are available to those who come from more distant places.
- The factory is guarded by seven or eight militiamen, under the command of a 9. militia sergeant. These men are quartered on the factory premises. A sentry is on duty, at the entrance gate, every hour of the day and night. This sentry checks the workers' cards, which are issued by the factory administration, as they enter the factory area to go to work.

10.	One fireman	is on d	inty for each work-shift of the factory.
